

Smart generator Management solutions

Galooli is pioneering a digital revolution in the generator world. Our AI-augmented platform makes energy management more efficient, evidence-based, and smarter. This means 24/7 real-time visibility of your generators, their performance, and predictive alerts before potential problems become irreversible. Galooli is creating energy efficiency opportunities for generators and greener business practices for service providers globally.

Revolutionizing traditional alert systems: Holistic RMS solution actively monitors generators' activity for maximum energy efficiency and minimal waste.

Smart Usage: Full control of generator activity including tracking KPIs like temperature, fuel level, RPM, kVa, and more according to the user's particular needs.

OPEX and CAPEX Saving: Reduce fuel loss and theft, on-site inspections, maintenance, unnecessary fueling, along with contractual and regulatory fines.

Sustainable Operations: Offers a significant reduction in the necessity of human resources, helps foster greener business practices and limit fuel waste and mismanagement.

Longer lasting: AI-enhanced rules and settings optimizes generator use and minimizes wear over time, reducing maintenance costs and more frequent replacement.

Agnostic Remote Solution: Integrating the generator RMS can be achieved through the cloud, proprietary and/or existing hardware to provide full remote access.

Actionable Insights : Data is not aggregated and extrapolated from. Instead, it is collected in real-time and analyzed using our proprietary AI to provide customers with applicable and practical courses of action to improve energy efficiency.
